Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-12 (canceled)

Claim 13. (currently amended): A method of authenticating the identity of a user to determine access to a system, comprising:

providing a possession-based data instance, a modified version of the possession-based data instance, a knowledge-based data instance, a biometric-based data instance, and a modified version of the biometric-based data instance;

generating a first cryptographic key based on the knowledge-based data instance;

applying the first cryptographic key to the modified version of the possession-based data instance to generate a first recovered data instance;

interrogating the first recovered data instance against the possession-based data instance to generate a possession value as a result of a first correspondence evaluation;

applying the first cryptographic key to the modified version of the biometric-based data instance to generate a second recovered data instance;

Application No. 10/060,039
Amendment: 09.30.2003
Responsive to Office Action: 07.16.2003

Page 3

interrogating the second recovered data instance against the biometric-based data instance to generate a biometric value as a result of a second correspondence evaluation;

combining the first cryptographic key, the possession value, and the biometric value to form ~~an authentication value~~ a second cryptographic key;

restricting the user's access to the system if the user's identity is not authenticated, based at least in part on the authentication value; and

granting the user's access to the system if the user's identity is authenticated, based at least in part on the authentication value.

14. (original): The method of claim 13, wherein restricting the user's access includes denying the user's access.

15. (original): The method of claim 13, wherein the modified version of the biometric-based data instance is a first modified version of the biometric-based data instance, and the biometric value is a second modified version of the biometric-based data instance.

16. (original): The method of claim 15, wherein the biometric value is a cryptographic hash of the biometric-based data instance.

Application No. 10/060,039

Amendment: 09.30.2003

Responsive to Office Action: 07.16.2003

17. (currently amended): The method of claim 13, wherein restricting the user's access to the system and granting the user's access to the system is based on a modified version of the ~~authentication-value~~ second cryptographic key.

18. (currently amended): The method of claim 17, wherein the modified version of the ~~authentication-value~~ second cryptographic key is a cryptographic hash of the ~~authentication-value~~ second cryptographic key.

19. (currently amended) A method of authenticating the identity of a user to determine access to a system, comprising:

providing a possession-based data instance, a stored biometric-based data instance, and a read biometric-based data instance;

interrogating the stored biometric-based data instance against the read biometric-based data instance to generate a biometric value as a result of a correspondence evaluation;

combining the possession-based data instance and the biometric value to form ~~an authentication-value~~ a cryptographic key;

evaluating the ~~authentication-value~~ cryptographic key to determine if the user's identity is authenticated;

restricting the user's access to the system if the user's identity is not authenticated, based at least in part on the cryptographic key ~~authentication-value~~;
and

granting the user's access to the system if the user's identity is authenticated, based at least in part on the cryptographic key authentication value.

20. (original) The method of claim 19, wherein restricting the user's access includes denying the user's access.

21. (original) The method of claim 19, wherein the biometric value is a modified version of the biometric-based data instance.

22. (original) The method of claim 21, wherein the biometric value is a cryptographic hash of the biometric-based data instance.

23. (currently amended) The method of claim 19, wherein restricting the user's access to the system and granting the user's access to the system is based on a modified version of the cryptographic key authentication value.

24. (currently amended) The method of claim 23, wherein the modified version of the cryptographic key authentication value is a cryptographic hash of the cryptographic key authentication value.

25. (currently amended) A method of authenticating the identity of a user to determine access to a system, comprising:

Page 6

Amendment: 09.30.2003

Responsive to Office Action: 07.16.2003

providing a possession-based data instance, a biometric-based data instance, and a modified version of the biometric-based data instance;

applying the possession-based data instance to the modified version of the biometric-based data instance to generate a recovered data instance;

interrogating the recovered data instance against the biometric-based data instance to generate a biometric value as a result of a correspondence evaluation;

combining the possession-based data instance and the biometric value to form a cryptographic key ~~an authentication value~~;

evaluating the cryptographic key ~~authentication value~~ to determine if the user's identity is authenticated;

restricting the user's access to the system if the user's identity is not authenticated, based at least in part on the cryptographic key ~~authentication value~~;

and

granting the user's access to the system if the user's identity is authenticated, based at least in part on the cryptographic key ~~authentication value~~.

26. (original) The method of claim 25, wherein restricting the user's access includes denying the user's access.

27. (original) The method of claim 25, wherein the modified version of the biometric-based data instance is a first modified version of the biometric-based data instance, and the biometric value is a second modified version of the biometric-based data instance.

Application No. 10/060,039

Amendment: 09.30.2003

Responsive to Office Action: 07.16.2003

28. (original) The method of claim 27, wherein the biometric value is a cryptographic hash of the biometric-based data instance.

 29. (currently amended) The method of claim 25, wherein restricting the user's access to the system and granting the user's access to the system is based on a modified version of the cryptographic key authentication value.

30. (currently amended) The method of claim 29, wherein the modified version of the cryptographic key authentication value is a cryptographic hash of the cryptographic key authentication value.
